PROFILE

Data Engineer with 5 years of experience designing and maintaining scalable ETL pipelines and cloud-based data infrastructure. Skilled in building automated workflows with Airflow, optimizing SQL-based data models, and deploying data solutions on Google Cloud Platform. Focused on delivering reliable, well-documented data systems that support analytics and business decision-making.

SKILLS

Python · Airflow · SQL · GCP · BigQuery · dbt · Docker · Kafka · Terraform · Git

WORK EXPERIENCE

Data Engineer — Vistula Data Solutions

Warsaw, Poland | 2022-Present

- # Design and maintain Airflow DAGs for daily ETL pipelines processing transactional and event data
- # Develop Python scripts for data extraction, transformation, and validation across multiple source systems
- # Optimize BigQuery SQL queries to improve pipeline performance and reduce processing costs
- # Collaborate with analytics team to define data models supporting reporting dashboards
- # Implement monitoring and alerting for pipeline failures using Cloud Monitoring

Technologies: Python, Airflow, BigQuery, GCP, SQL, Docker

Junior Data Engineer — Nordic Analytics Group

Warsaw, Poland | 2020-2022

- # Built and maintained batch data pipelines using Python and SQL for internal reporting needs
- # Assisted in migrating on-premise data warehouse workloads to Google Cloud Platform
- # Wrote unit tests and documentation for ETL processes to improve maintainability
- # Supported senior engineers in troubleshooting data quality issues

Technologies: Python, SQL, GCP, Airflow, PostgreSQL

EDUCATION

Bachelor of Science in Computer Science

Warsaw University of Technology — 2020
